CLAIMS

What is claimed is:

1	1.	A system for carculating discounts on teems, the system comprising.
2		a processor; and
3		a memory, including a program executable by the processor, the program
4		including:
5		an estimator configured to allow user selection of at least one item for
6		creating a cost quote of total price, each item being a member of an item unit
7		having associated therewith a volume;
8 5		a unit setting module configured to allow setting membership of at least
9		one item unit in at least one first group unit, each first group unit having
9 4 10 11 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1		associated therewith a cumulative volume of the at least one item unit therein;
		a discount rule module configured to allow setting at least one discount
12 13 13 13 13 14 15 15 15 15 15 15 15 15 15 15 15 15 15		threshold for each first group unit, each discount threshold of a first group unit
13 <mark>FU</mark>		having an associated discounted price given to a user when the discount threshold
140		is met; and
15		a calculator configured to recommend selection of additional volume to
16		attain a next discount threshold.
1	2.	The system of claim 1, wherein, when an item unit is a member of more than one first
2		group unit, the calculator is further configured to determine an allocation of volume of an
3		item unit amongst the first group units to achieve a minimized total price.

- The system of claim 1, wherein the calculator is further configured to determine award of 1 3. 2 an additional discounted price based on achieving a discount threshold in more than one 3 first group unit.
- The system of claim 1, wherein the calculator is configured to recommend selection of 4. 1 additional volume when a volume selected is within a discount variance of the next 2 3 discount threshold.
- 5. The system of claim 1, wherein a type of volume is determined by the type of item and 1 the control of the co is chosen from the group comprising: a monetary amount, weight and quantity.
 - The system of claim 1, wherein each first group unit includes more than one discount 6. threshold.
 - 7. The system of claim 1, wherein the discount rule module is further configured to allow setting at least one discount threshold for each item unit, each discount threshold for an item unit having an associated discounted price.
- The system of claim 7, wherein the calculator is further configured to recommend 1 8. selection of additional volume to attain a next discount threshold for an item unit. 2

- The system of claim 7, wherein the calculator is configured to recommend selection of additional volume when a volume selected is within a discount variance of the next discount threshold for the item unit.
- 1 10. The system of claim 1, wherein the unit setting module is further configured to allow setting membership of at least one first group unit into at least one master group unit, and the discount rule module is further configured to allow setting one of a discount formula and a discount table for each master group unit.
- The system of claim 10, wherein the discount rule module is further configured to selectively assign a rank to each discount threshold of each first group unit.
 - 12. The system of claim 11, wherein the calculator is further configured to determine a discounted price using one of the discount formula and discount table and an achieved rank of at least one first group unit.

- 1 13. The system of claim 12, wherein the one of the discount formula and discount table provide a discounted price based on a highest achieved rank for each first group unit.
- 1 14. The system of claim 13, wherein a discounted price provided by the one of the discount
 2 formula and discount table is provided by assigning a discounted price associated with a
 3 rank higher than any achieved rank to each first group unit.

- 1 15. The system of claim 1, further comprising a coop module configured to allow creation
 2 of a coop of a plurality of users to pool purchases and cumulatively attain a discounted
 3 price.
- 1 16. The system of claim 15, wherein the discount rule module is further configured to set at
 2 least one coop discount threshold for each first group unit and each item unit.
- 1 17. The system of claim 15, wherein the calculator is configured to recommend selection of at least one additional item or additional volume to attain a next discount threshold with preference for minimizing the total price of an individual user rather than the coop.

2 -

2

3

- 18. The system of claim 15, wherein the coop module is configured to allow an administrator to set at least one of: purchase closing time, pricing structure, maximum discount threshold available and coop membership rules.
- 19. The system of claim 15, wherein the unit setting module is further configured to allow setting membership of at least one first group unit into at least one master group unit, and the discount rule module is further configured to allow setting one of a discount formula and a discount table for each master group unit.
- 1 20. The system of claim 19, wherein the discount rule module is further configured to selectively assign a rank to each discount threshold of each first group unit.

- The system of claim 20, wherein the calculator is further configured to determine a discounted price using one of the discount formula and discount table and an achieved rank of at least one first group unit.
- The system of claim 21, wherein the one of the discount formula and discount table provide a discounted price based on a highest achieved rank for each first group unit.
- The system of claim 22, wherein a discounted price provided by the one of the discount formula and discount table is provided by assigning a discounted price associated with a rank higher than any achieved rank to each first group unit.

7

8

- 24. The system of claim 1, further comprising a purchasing module configured to permit a user to make a purchase of the selected at least one item.
- 25. The system of claim 1, wherein the unit setting module is further configured to allow setting membership of at least one item unit in at least one second group unit, each second group unit having associated therewith a cumulative volume of the at least one item unit therein;

the discount rule module is further configured to allow setting at least one discount threshold for each second group unit, each discount threshold of a second group unit having an associated discounted price given to a user when the discount threshold is met; and

2

- the calculator is further configured to recommend selection of additional volume to attain a next discount threshold in each second group unit.
 - 26. The system of claim 25, wherein, when an item unit is a member of more than one second group unit, the calculator is further configured to determine an allocation of volume of an item amongst the second group units to achieve a minimized total price.

A method for calculating discounts for quotes or purchases of items, the method 1 2 comprising the steps of: 3 allowing selection of an item by a user to attain a quote; organizing an item available for purchase into an item unit and at least one first 4 group unit that includes one or more items, each item unit and each group unit having 5 associated therewith a volume; 6 setting at least one discount threshold for each item unit and each first group unit, 7 each discount threshold having an associated discounted price; 8 calculating when a volume of an item unit is within a discount variance of a next 9 10 discount threshold for the item unit; recommending selection of additional volume to attain the next 1144 discount threshold for the item unit; 12点 13 == calculating when a volume of a first group unit is within a discount variance of a next discount threshold for the first group unit; and recommending selection of additional volume to attain the next discount threshold 16 for the first group unit. The method of claim 27, wherein the step of organizing further includes organizing at 28. 1 least one first group unit into at least one master group unit that includes one or more 2 3 group units.

- 29. The method of claim 28, further comprising assigning at least one discount threshold in 1 2 each first group unit a rank, and, when the achieved ranks of the first group units of the master group unit meet a standard, providing a discounted price associated with a rank 3 higher than any achieved rank to each first group unit. 4
- The method of claim 27, wherein the step of setting at least one discount threshold for 30. 1 2 each item unit and each first group unit includes setting a discount threshold based on 3 one of: a monetary amount, weight and quantity.
- 31. The method of claim 27, further comprising the step of allocating a volume of an item unit between more than one first group unit to maximize the discounted price.
 - The method of claim 27, further comprising the step of pooling user purchases into a 32. coop to cumulatively attain a discount threshold.
- The method of claim 32, wherein steps of recommending includes recommending a 33. 2 selection with preference for an individual user rather than the coop.
- 1 34. The method of claim 27, further comprising allowing a user to make a purchase of the 2 selected item.

1	35.	A system for estimating purchase cost of items and making a recommendation to attain
2		a discounted price, the system comprising:
3		a processor; and
4		a memory, including a program executable by the processor, the program
5		including:
6		a) an estimator configured to allow a user to select at least one item to
7		attain a total price quote;
8		b) an administration module configured to allow organization of an item
9		into at least one unit, each unit including at least one discount threshold that may
10 <u>.</u> 5		be attained by selection of a volume of an item organized therein;
` 1}≟		c) a discounter including a calculator configured to:
10 11 11 11 11 11 11 11 11 11 11 11 11 1		i) determine a next discount threshold for each unit; and
		ii) recommend selection of additional volume to attain a next
14		discount threshold in at least one unit; and
15 <mark>1</mark> 1		d) a purchasing module configured to permit a user to make a purchase.
